"Inspired by Science"

Art Exhibition: Inspired by Science

NCRC is once again at the forefront of new ideas in collaborations across boundaries with a new art exhibition titled "Inspired by Science", on view this month at NCRC. Works of art by University of Michigan School of Art and Design faculty members, as well as Michigan-based and internationally known artists are featured in this exhibition.

"Inspired by Science" includes Sherri Smith and Michael Rodemer, who are respected faculty members at the U-M School of Art and Design, and Bradley Smith, the Associate Dean for Creative Work, Research and Graduate Education, and Professor, School of Art and Design. Also included are well-known Michigan artists Gary Eleinko, S. Kay Young and Sharon Que.

Although each artist represents a different medium and inspiration, these works are directly connected by the past, present and future of science.

Inspired by Science
March 21 through June 21, 2013
NCRC Building 18, Rotunda Gallery
