Collaborating Across Disciplines

The collaborate! initiative at the North Campus Research Complex is sponsoring a day-long workshop on May 13, 2013 focusing on collaborative research in the academic environment. Consisting of speakers, interactive working sessions, and networking opportunities, this workshop explores the critical role of interdisciplinary collaboration and team science in a successful research career. We will hear stories of successes and challenges from a diverse group of researchers, as well as current trends in collaborative research.

This inaugural event will initiate an ongoing dialogue on how to facilitate and implement collaborative research.

Please share with your research community.

RSVP Deadline May 9th.
