Ann Arbor Urological Health Services Research Symposium

On September 18-19, 2014, the Dow Division of Health Services Research in the University of Michigan Department of Urology will host the 2nd Ann Arbor Urological Health Services Research Symposium. Building on the highly successful initial symposium held in 2012, they will gather experts in urological HSR, as well as national thought leaders in the social sciences, to expand the boundaries of our current research agendas. In this year’s symposium, they will focus on opportunities for “big data” to improve healthcare quality. In addition, they will discuss the implications of social networks on urological care, and the roles of implementation science and quality improvement interventions to enhance care delivery. They have chosen topics that are not the typical material for urological HSR in order to provide a new and diverse learning experience that they hope will stimulate innovation.

Brochure (PDF)

Facilities

- Vehicle & Pedestrian Connector Construction
- Building 10: Hallway Restriction
- Building 10: New Occupant Renovation
- Building 10: Air Handling Project Updates
- Building 16: Air Handler Repairs
